EGPROC 2024 — REPORT

Conference Highlights

The conference began with a pre-conference workshop delivered by MPIB employees and conference organizers Kamil Fulawka and Dirk Wulff. The workshop introduced participants to the use of open-source large language models (LLMs) for analyzing verbal reports to uncover subjective decision reasons. It started with an introductory session on the fundamentals of LLMs, followed by a concise lecture on the history and current trends in risky choice research. The workshop's highlights were two hands-on sessions, where participants applied LLMs to analyze real verbal reports, gaining practical insights into the subjective reasons driving risky decisions. The workshop was well-received, providing participants with a valuable foundation for the conference discussions. The corresponding GitHub repository is available at: https://github.com/kfulawka/llms_egproc.

The second day of the conference featured two talk sessions, **Attention & Information Search** and **Social Decision Making and Education**, which presented research utilizing various process tracing techniques, including Mouselab and eye-tracking, to deepen understanding of decision-making processes across domains. After lunch, Professor Jella Pfeiffer from the University of Stuttgart delivered an online keynote talk titled **Decoding Consumer Choices: The Predictive Power of Eye-Tracking in Virtual Reality Retail Environments**. In the afternoon, a poster session provided junior participants with an opportunity to present their ongoing projects and gather feedback.

The third day included three talk sessions on **Verbal Reports, Memory & Perception**, and **Methodological Developments**. After lunch, Professor Lukas Walasek from the University of Warwick delivered a keynote lecture on his award-winning paper and ideas for future research, titled **Incommensurability and Structure of Everyday Choices: LLM Analysis of Real-World Dilemmas**. The conference concluded with a summary and reflection session, where attendees shared key takeaways and explored opportunities for future collaboration.

Overall, the conference facilitated knowledge sharing, sparked engaging discussions, and fostered collaboration across diverse areas of decision research. The strong reception of the pre-conference workshop, as well as the sessions and keynotes addressing the innovative use of LLMs in process tracing research, was especially gratifying.

Costs reimbursement

A detailed schedule, along with the invoice and final budget, is provided in separate files for your review. We kindly request a reimbursement of 2,311 Euros, covering the costs of coffee breaks and the majority of student grants awarded. The remaining expenses were covered by 1,575 Euros collected from participant fees.

Our reimbursement request is lower than the initially estimated 3,000 Euros due to two factors: Professor Pfeiffer's inability to attend the conference in Berlin due to illness, and higher-than-expected attendance by non-EADM members, which increased the revenue from conference fees.

Sincerely,
Kamil Fulawka, Florian Bolenz, & Dirk Wulff
